

KidBox

One shared place for the family: calendar, to-dos, expenses and documents, private by design.

Vittorio Scocca, founder | kidboxapp.com
Pitch deck - draft, data as of 7 October 2026
iOS | Android | Web

THE PROBLEM

Family logistics live everywhere

Scattered

Plans in chat threads, dates in different calendars, lists on paper, documents in somebody's inbox. Nobody sees the same picture.

Dropped balls

Who picks up the kids? Who pays? Where is the vaccination card? The answer is always: ask again.

Hard to share

Most tools are built for one person. The second parent, grandparents or sitter get left out or can't see the same data.

This is especially acute for parents who live apart, and for any family that coordinates more than two adults.

THE SOLUTION

One app the whole family uses

Calendar

Events, recurrences, reminders; phone calendars and school feeds.

To-do and requests

Assignable tasks; "Who takes Marco?" with a link for people without the app.

Shopping and expenses

Shared list; costs from visits, cars and house become expenses automatically.

Documents and wallet

Notes, documents, tickets and cards, encrypted with a key that stays with the family.

Family AI assistant

Reads documents, builds plans, answers about the family's own data.

Everywhere

iOS, Android and web, same data, in Italian, English, French and Spanish.

WHAT WE LEARNED

The product works when a second person joins

A family app used by one person is just a notebook. Value appears when another member joins and the family starts to coordinate.

So our north-star metric is not downloads or active users. It is **families with two or more real members**.

How we track it

Test accounts and internal users are excluded from the numbers. Store test devices are excluded from new-user counts. We report what survives these filters.

Traction: small, honest numbers

19
families with 2+ real members (1 Oct)

23
weekly active users of value (down from 31 after pausing ads)

24
Pro trials granted: 23 started automatically, 1 from the in-app button

0
ad spend since 3 Oct: campaigns paused by choice

Cohort of 28 Sept: 21 new families, 1 with 2+ members. Paid acquisition cost per real family: about EUR 20.

Two cohorts together: EUR 58.65 spent for 7 real families, about EUR 8.4 each. Samples are very small and we say so.

Live in both stores (iOS 2.3.9, Android 2.4.5) plus a web app. Paid conversion is not yet validated.

BUSINESS MODEL

Free for every family, Pro and Max for more

Free

Unlimited members. Calendar, to-dos, shopping, notes, wallet and expenses. 5 one-time AI messages.

Pro

AI assistant, meal and fitness plans, trip itineraries. Monthly or yearly. Up to 100 AI messages a month per family.

Max

Everything in Pro with higher limits: up to 200 AI messages a month per family.

14-day Pro trial from an in-app button, no card required. AI cost today is about USD 0.30 a day, almost all from the local News feature, so cost grows with editions, not users.

How families find KidBox

Invites

Each family brings the next member by link. The funnel from invite shown to attempt is our known weak point and the main product focus.

Paid social test

Meta campaigns paused on 3 Oct. While running they brought roughly 3-10 new users a day from Italy; without them about 1 a day. Cost per real family is not yet efficient.

Professional channels

Outreach started on 7 Oct to family-law associations, mediators and parent associations that recommend tools to families. No results yet.

Also: a blog with 106 articles in Italian and English, and a landing in four languages.

WHY US

Private by design, lean by design

Privacy

Documents, notes, passwords, wallet, chat and media are encrypted with a family key. The backend sees bytes, not content.

One person, three platforms

iOS, Android and web with the same data model, backend with 92 functions, built and run by a single founder.

Costs under control

Backend invocations inside the free tier. Monthly AI cap per plan keeps the worst case predictable.

What we do not claim: market size and revenue we cannot show. We prefer to be precise.

Team

Vittorio Scocca

Founder. Product, engineering and growth.

KidBox is a sole proprietorship (ditta individuale) in Italy, with one founder.

Senior iOS developer, 8+ years in native mobile apps for enterprise clients (messaging and VoIP, banking, automotive, public-sector identity apps).

Earlier, founder and managing director of three software companies in Italy (2010-2017), shipping apps to the App Store.

Laurea in Computer Engineering (5-year degree), University of Sannio, and 4 published research papers on quality and risk management.

THE ASK

What we are looking for

What we want to prove next

1. Paid conversion from the 14-day trial.
2. A cost per real family that is repeatable.
3. Retention at 7 days for families with 2+ members.

What we need

Pre-seed round: EUR 150,000 to 300,000, at an expected pre-money valuation of EUR 1.35M (about 10% for the minimum). Instrument to be defined with the legal structure.

Also welcome: introductions to investors and to professional networks that serve families.
